

ADD THE RIGHT AMOUNT OF EXILVA

EXILVA DOSAGE GUIDE

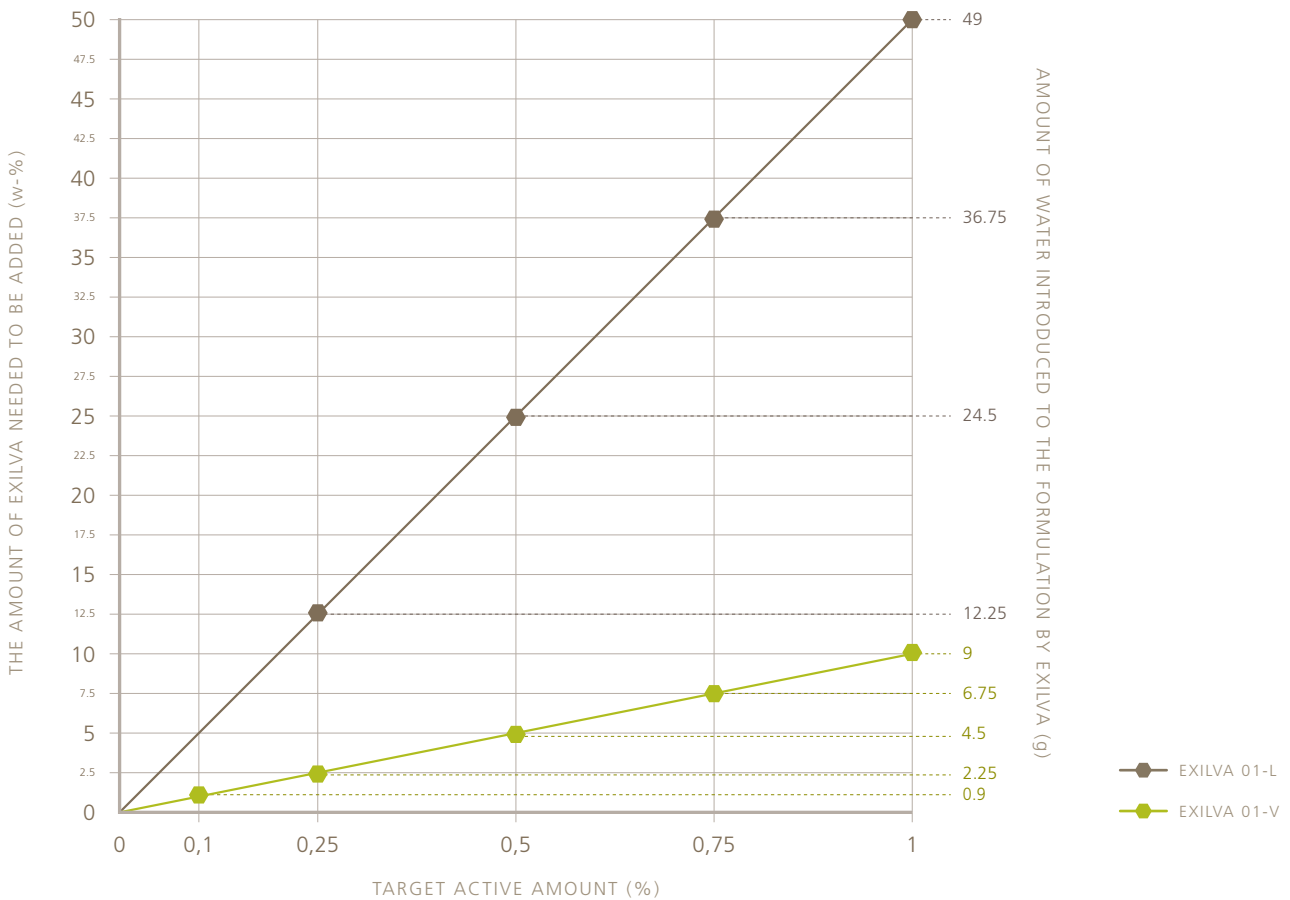

FIGURE 1: The dosage of different Exilva grades in order to reach the required target active amount (%).

HOW TO READ THIS GRAPH:

This graph tells you how much active amount you will gain from your delivered Exilva product, both in L- and V-grade. As Exilva is delivered as either a 2% suspension or a 10% paste, you also need to take into consideration the amount of water that will be introduced to your formulation.

EXAMPLE:

If you want to make a 100 g formulation with 0.5% active amount of Exilva, you add either:

- 5 g of Exilva 01-V, or
- 25 g of Exilva 01-L

RECOMENDED STARTING DOSAGE OF EXILVA: 5% OF EXILVA 01-V OR 25% OF EXILVA 01-L

European project funded by the Bio Based Industries Joint Undertaking under the European Union's Horizon 2020 research and innovation program under grant agreement N° 709746.
